

Alsipercha Fall Arrest System

We have two main types of temporary fall arrest system, Alsipercha and Loading System.

Alsipercha is a 'zero' factor fall arrest system particularly useful on perimeters. Designed to prevent falls from height during decking of horizontal formwork operations, it provides total safety when placing decking panels, edge protection, slab edges, stop-ends and generally in all situations that may arise during the form working process, where there is a risk of a fall from height.

Features and Benefits

- Complies to standard EN 795 Class B
- Allows workers to safely cover a surface area of up to 125m² and a radius of 6.5m round the column
- Easy to assemble and use
- Lightweight design made of the highest quality steel
- No external assembly accessories are required
- Has a wide range of accessories that allow it to be situated at any point on the job, providing total safety at all times

"In 2006/07 25% of all fatal injuries at work were from falls from height"
