

# Net Barrier System

This extremely flexible net barrier system is at the forefront of modern edge protection solutions. Integrated with the tried and tested fall arrest safety net system, you have a world leading, life saving tool that will place people working at heights in a cocoon of EN1263-1 standard safety netting. This allows workers to operate with confidence and in complete safety.

## Features and Benefits

- Fully meets the requirements of the European standard N13374 temporary edge protection systems.
- Offers up 2m high containment
- Covers large overhangs of over 1.5m, combining the fall arrest needs of the overhang with the edge protection provision.
- Ensures the feeling of security and confidence within the people working at height.
- Restricts the possibility of people operating outside of their agreed method statement.
- Offers not only protection from falls from height but offers a high degree of material containment and protection of those working below.
- The lightweight nature of this product makes it extremely quick and easy to erect, move and dismantle using wide range of methods, including MEWPS and Industrial Roped Access.
