

# Steel Mesh Barrier System

This lightweight, versatile steel mesh barrier system provides you with edge protection that is strong and durable, and also extremely quick and easy to install.

With an enormous number of applications, this system can be used in almost all situations within the edge protection spectrum.

## Features and Benefits

- Designed and manufactured in compliance with EN 3374 Class A, B and C
- Guardrail, toeboard and mesh in one product
- Hard-mesh coverage with impact-absorbing capacity
- Close return for greater debris containment. Attachment options available for complete containment of falling objects.
- Adjustable in height
- Wide range of attachments for every building application
- Available in two standard sizes: 1.3m and 2.6m

Self closing entry points provide useful access solutions for service ducts, lift shafts, stairwells or for any edge where access is required.

*"Falls from height remain the single biggest cause of work place deaths and one of the main causes of major injury."*
